**Professor:** Dr. Guillermo V. Red, Jr.

**Year/Sec:** BSIS – 3A

**Course:** IS ELEC 3

## Week 11 - Assignment

---

### Backend Setup Summary

#### University Event Management System (UEMS)

**Group:** Sigma Coders

**Date:** 11/25/2025

---

### NODE AND EXPRESS SETUP DESCRIPTION

---

#### Project Initialization:

# Initialize Node.js project

```
npm init -y
```

# Install production dependencies

```
npm install express mongoose cors dotenv bcryptjs jsonwebtoken multer helmet  
express-rate-limit validator uuid
```

# Install development dependencies

```
npm install -D nodemon jest
```

# Create project structure

```
mkdir models controllers routes middleware config utils uploads
```

## **Server Configuration:**

**The Express.js server is configured with:**

- Security middleware (Helmet, CORS, Rate Limiting)
- JSON body parsing with 10MB limit
- Environment variables via dotenv
- MongoDB connection with Mongoose
- ODM Modular route handling with separate route files
- Global error handling and 404 routes
- Static file serving for uploaded event media

## **Development Scripts:**

```
{  
  "scripts": {  
    "start": "node server.js",  
    "dev": "nodemon server.js",  
    "test": "jest"  
  }  
}
```

## **Key Dependencies:**

- **express:** Web server framework
- **mongoose:** MongoDB object modeling
- **bcryptjs:** Password hashing
- **jsonwebtoken:** Authentication tokens
- **multer:** File upload handling
- **cors:** Cross-origin resource sharing
- **helmet:** Security headers

## DEFINED API ENDPOINTS

---

### Authentication Routes

Method	Route	Description	Access
POST	/api/auth/register	student registration	Public
POST	/api/auth/login	user login	Public
GET	/api/auth/me	get current user	Authenticated

### Event Routes

Method	Route	Description	Access
GET	/api/events	get all events (with filters)	Public
GET	/api/events/:id	get event details	Public
POST	/api/events	create new event	Organizer+
PUT	/api/events/:id	update event	Owner/Admin
DELETE	/api/events/:id	delete event	Owner/Admin
GET	/api/events/:id/analytics	get detailed analytic for specific event	Owner
GET	/api/users/my-events/analytics	get analytics overview for all events owned by the current user	Owner

## Event Proposal Routes

Method	Route	Description	Access
POST	/api/events/proposals	create event proposal	Student+
POST	/api/events/proposals/:id/submit	submit proposal	Owner
PUT	/api/events/proposals/:id	update draft proposal	Owner

## Registration and Attendance Routes

Method	Route	Description	Access
POST	/api/events/:id/register	register for event	Student+
DELETE	/api/events/:id/register	unregister from events	Student+
GET	/api/users/registrations	get user's registration	Owner
POST	/api/events/:id/attend	mark attendance	Organizer+

## Admin Routes

Method	Route	Description	Access
GET	/api/admin/pending-events	get pending approvals	Admin
PUT	/api/admin/events/:id/approve	approve event	Admin
PUT	/api/admin/events/	reject event with	Admin

	:id/reject	notes	
GET	/api/admin/users	get all users	Admin
GET	/api/admin/statistics	platform analytics	Admin

### Notification and Sharing Routes

Method	Route	Description	Access
GET	/api/notifications	get user notifications	Owner
GET	/api/share/events/:id	generate sharable link	Public

## BACKEND ARCHITECTURE

---

### MVC Pattern Implementation:

uembs-backend/

  |—— models/ (Mongoose Schemas)

    |—— User.js

    |—— Event.js

    |—— Registration.js

    |—— Attendance.js

    |—— Notification.js

  |—— controllers/ (Business Logic)

    |—— authController.js

```
    ├── eventController.js  
    ├── eventProposalController.js  
    ├── adminController.js  
    └── notificationController.js  
    └── routes/ (API Endpoints)  
        ├── authRoutes.js  
        ├── eventRoutes.js  
        ├── eventProposalRoutes.js  
        ├── adminRoutes.js  
        └── notificationRoutes.js  
    └── middleware/ (Custom Middleware)  
        ├── auth.js  
        ├── adminAuth.js  
        ├── upload.js  
        └── eventOwnership.js  
    └── config/ (Configuration)  
        └── database.js
```

### Database Schema Design:

- **User Model:** Student accounts with role-based permissions
- **Event Model:** Event details with approval workflow
- **Registration Model:** Event registration tracking
- **Attendance Model:** Participation records
- **Notification Model:** User notifications system

## **Key Features Implemented:**

- Event Proposal System with admin approval workflow
- Role-Based Access Control (Student, Organizer, Admin)
- File Upload System for event media
- JWT Authentication with secure tokens
- Social Sharing with unique event links
- Notification System for user updates
- Search & Filtering by categories and tags

## **SECURITY MEASURE**

---

### **Authentication and Authorization:**

- JWT-based authentication with 30-day expiry
- Password hashing using bcryptjs (12 salt rounds)
- Role-based middleware for route protection
- Rate limiting (100 requests per 15 minutes per IP)

### **Data Protection:**

- Environment variables for sensitive configuration
- Input validation and sanitization
- File type and size restrictions for uploads
- CORS configuration for frontend integration

### **Database Security:**

- MongoDB Atlas with secure connection string
- Mongoose schema validation
- Proper indexing for performance
- Error handling for database operations

## DEVELOPMENT AND DEPLOYMENT

---

### Environment Configuration:

- **MONGODB\_URI**: MongoDB connection string
- **JWT\_SECRET**: JWT token secret key
- **CLIENT\_URL**: Frontend application
- **URL\_UPLOAD\_PATH**: File upload directory

### Production Readiness

- Environment-based configuration
- Error handling and logging
- Performance optimization
- Security headers and
- CORS Rate limiting and input validation

## TESTING EVIDENCE:

The screenshot shows the Postman application interface. At the top, there is a header bar with a dropdown menu set to "GET", a URL input field containing "http://localhost:5000/api/events", and a blue "Send" button. Below the header, there are tabs for "Query", "Headers 2", "Auth", "Body", "Tests", and "Pre Run". The "Body" tab is currently selected and has a sub-tab "JSON" which is also selected. In the JSON body editor, there is a single digit "1". Underneath the body editor, the status of the request is displayed as "Status: 200 OK", "Size: 222 Bytes", and "Time: 236 ms". The response body is shown in a code block, starting with "1 {". The response tab is also visible at the bottom right.

```
1 {  
2   "success": true,  
3   "message": "Get all events endpoint - ready for implementation",  
4   "data": {  
5     "endpoint": "GET /api/events",  
6     "purpose": "Browse all approved events",  
7     "features": [  
8       "filtering",  
9       "search",  
10      "pagination"  
11    ]  
12  }  
13}
```

```
PS C:\Projects in Framework\University-Event-Management-System\uems-backend> npm run dev  
> uems-backend@1.0.0 dev  
> nodemon server.js  
  
[nodemon] 3.1.11  
[nodemon] to restart at any time, enter `rs`  
[nodemon] watching path(s): *.*  
[nodemon] watching extensions: js,mjs,cjs,json  
[nodemon] starting `node server.js`  
⚡ UEMS Backend Server running on port 5000
